

D-TEK 6160

Detect your vehicle's status wirelessly. Retrieve accurate and reliable vehicle information automatically with D-Tek, Weldon's digital technician wireless maintenance system.

No need to spend time manually gathering vehicle data. Let D-Tek wirelessly transmit all the values for you. Each time a truck leaves the station and when it returns, D-Tek captures critical maintenance data and sends it to the receiver located on the station's computer in less than a second. This data can be viewed to alert you to such things as low tire pressure, high coolant temperature, low oil levels, etc.

The data captured can be sent over the internet from the station's computer to a central maintenance center. With the D-Tek Tracker software, you can review the details of a truck in your station or view all the stations' vehicles for an easy and convenient way to manage your entire fleet.

Optionally integrate with the V-MUX® multiplexing system for a complete solution for worry-free maintenance.

- Provides easy access to critical vehicle maintenance information
- Automatically transmits data wirelessly
- Can be set to automatically notify you on mission critical issues
- Improve preventative maintenance schedules

Data Transmitted

- Engine Hours
- Mileage
- Fuel Used
- Fuel Level
- Oil Pressure
- High Oil Pressure
- Oil Temperature
- High Oil Temperature
- Voltage
- Coolant Temperature
- Tire Pressure

6162-0000-00 Receiver
Located on station's computer. Collects data from each transmitter within a 300 foot range (up to 1000 transmitters)

6161-0000-00 Transmitter
Located on vehicle. Sends data to the Receiver (base station)

Part Number	Description
6162-0000-00	Receiver
6161-0000-00	Transmitter
0L40-2728-00	Wire Kit
0R10-2727-00	Tire Pressure Sensor
